

QGIS Application - Feature request #11757

Attribute forms should have an "Apply" button

| Pull Request or Patch supplied: | Yes | |
| Easy fix?: | No | |
| Description | | |
| <p>Hello,</p> <p>I think it could be valuable to add an apply button on the QDialogButtonBox for the form validation.</p> <p>For the moment, there is only Ok and Cancel.</p> <p>When the Apply button would be clicked, data should be committed (at least in an editing buffer) and the form will stay opened.</p> <p>Data shown in attribute table opened after the apply click should shown the committed data.</p> | | |
