Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description hi, It would be nice to be able to export the layout in geotif because it have the advantage of containing the coordinate system, which is not the case of worldfiles. It would also be good to choose a method of compression and color mode: RGB , number of indexed color , grayscale. Finally, the ability to export georeferenced raster PDF with the choice of previously mentioned adjustments would also be convenient.

Good news.

Geotifs exported from Qgis 3.0 are in RGB without alpha channel with LZW compression. Finished the risks of saturation of the spaces disks when there is a large number of export to generate.
