

QGIS Application - Bug report #11851

On-the-fly projection shift for EPSG:3375 on QGIS 2.6.1 Brighton for Mac OS X

2014-12-11 06:05 PM - Nizar Damis

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Projection Support	
Affected QGIS version:	2.6.1	Regression?: No
Operating System:	OsX	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 20066
Description		
<p>I'm using QGIS 2.6.1 Brighton (Kyngchaos) on a newly installed Mac OS X Yosemite. There's an apparent shift (hundreds of kilometer) when I add layers which have EPSG:3375 CRS. I'm using Google Satellite as basemap (using OpenLayers 1.3.5 plugin). I have tried overlaying layers in EPSG:4269 CRS and it does not have the big shift issue.</p> <p>A windows built QGIS 2.6.0 doesn't have this shifting problem. I attached a screenshot of the shift and an example layer in EPSG:3375 CRS for you to try.</p> <p>Regards, nizar</p>		

History

#1 - 2014-12-14 03:42 AM - Giovanni Manghi

- *Operating System set to OsX*

is Ok on Linux too.

#2 - 2017-03-01 12:54 AM - Nyal Dawson

- *Resolution set to invalid*

- *Status changed from Open to Closed*

The openlayers plugin has numerous issues like this. It's not a problem in QGIS itself, it's an issue with the plugin.
