Easy fix?:	No	
Description		
<p>Hi,</p> <p>Adding "Data defined override" option to map composer has opened a new world of map automation and offered great improvement. Thanks. I think this button should be added to many other options in the composer interface (<i>legend and scale bar main properties, scale bar units and segments options but i think i'd rather open another ticket for that, right?</i>), particularly to the number of columns a legend might display.</p> <p>Indeed, thanks to this article (thanks, Alexandre), I designed an atlas composition that changes the paper sheet orientation according to features values. What I would like to do is to specify, according to the paper orientation, whether the legend in the composer should be displayed in one or three column(s). Currently, it's just possible to set one value. Thanks once again.</p>
