QGIS Plugin Site - Bug report #12
no need for a Google API key?

2011-03-04 11:19 AM - Paolo Cavallini

Status:	Closed

Description
When clicking on the map of user, an error message asking for a Google API key is displayed. This does not seem necessary

History

That is on http://plugins.qgis.org/community-map/create_user_form.html

- Assignee set to Alessandro Pasotti

The key is needed by the widget because it also uses google layers, so we can either not use google layers (suggested solution) or provide the key.

#3 - 2011-04-06 11:52 PM - Paolo Cavallini

Agreed, the preferred solution would be to avoid GMaps.

#4 - 2011-06-08 11:56 AM - Alessandro Pasotti

- Status changed from Open to Closed

I should have removed Gmap from all front-end maps (still unsure about back-end)
