<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 20291
<b>Description</b>		
<p>I have this map project where I use Map Unit as the unit for all my lines and markers etc (instead of millimeters because I want a good preview of how it will look like exported). When I export the map to SVG using the print composer, the line widths change for each map export!</p> <p>The same map with different extents render a line with the width "1.18116" in one extent and the other extent show "1.18114". I know it's not a huge difference but since Illustrator CC doesn't get the line widths right when importing my SVG:s from QGIS I have to search and replace the values in the SVG before importing to Illustrator. But since these values change all the time I can't make a nice script translating.</p> <p>I guess the SVG export -&gt; Illustrator CC is a bug in Illustrator or does it have something to do with QGIS? I'll create another ticket so we can discuss that there.</p>
