Status:	Open	Resolution: Copied to github as #: 20366
Priority:	Normal	
Assignee:		
Category:	Symbology	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
Hello, I try to work with the TTF font Cadastra downloadable from http://www.cadaastre.ch/internet/cadaastre/fr/home/products/cadastra_map.html This CadastraSymbol_TTF.zip Police consists of 2 "layers" 1 for the symbol; 1 to the symbol of the mask. Installed ubuntu 14.04, using commands <pre>sudo gnome-font-viewer CadastraSymbol.ttf sudo gnome-font-viewer CadastraMask.ttf</pre> This font is available in 2 distinct definitions in LibreOffice, while in QGIS, it appears "that" made in its release: Layer 1 + Layer 2, all in one color (=> so unusable). Is it possible use those in the same way as LibreOffice (TTF layers separated)? Thank you for your commitment, Best Regards Daniel		

History

#1 - 2015-02-10 04:05 PM - Jürgen Fischer

- Project changed from QGIS Redmine (QGIS bug tracker) to QGIS Application

#2 - 2015-02-10 04:09 PM - Jürgen Fischer

- Category set to Symbology

#3 - 2015-02-10 04:09 PM - Jürgen Fischer

- Subject changed from Utilisation de symboles TTF "multicouches" to Using 'multi layered' TTF symbols

#4 - 2017-05-01 12:47 AM - Giovanni Manghi

- Easy fix? set to No
