QGIS Application - Bug report #12210
QGIS Server: value relations with multiple values are not properly resolved

2015-02-16 03:10 AM - Andreas Neumann

Status:	Closed		
Priority:	Severe/Regression		
Assignee:	Jürgen Fischer		
Category:	QGIS Server		
Affected QGIS version:	2.6.0	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	
Crashes QGIS or corrupts data:		**Copied to github as #:**	20399

Description

In case of a value relation widget there is the option to select multiple values. QGIS then stores them in a text column with curly brackets and commas as a separator.

Like: {1,3,7}

QGIS server should then resolve these values, replace the codes with their text representation and output them eg. as:
Meier,Müller,Schmid

Currently, QGIS server returns the raw values like {1,3,7}. In case of only a single value, the output is fine.

I also noticed that when resolving value relations, QGIS server always adds round parenthesis around the value, which wasn't the case before. These parentheses should be removed.
