

QGIS Application - Bug report #12221

Transparency of layer change the size of the legend symboles

2015-02-18 02:47 AM - Lucien Blandenier

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Affected QGIS version:	2.4.0	Regression?: No
Operating System:	Windows 8	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	No	Copied to github as #: 20409
Description		
<p>Hello,</p> <p>When applying a transparency to an entire layer in the layer properties, the symboles of the svg legends are resized in the legend boxes when exporting the image. This problem is visible on the exported image but not in the map composer.</p> <p>This problem could be avoided by applying the transparency separately to each items of the layer instead of the entire layer.</p>

I cannot replicate - or maybe I just do something else than you do. Could you please post steps to reproduce and the (wrong) resulting image you get?

#2 - 2015-02-19 02:54 AM - Martin Dobias

- Resolution set to fixed/implemented
- Status changed from Open to Closed

Oh I see - your bug report was for version 2.4. This is fixed now in master (most likely already fixed in 2.6 with legend refactoring)

#3 - 2015-02-19 03:00 AM - Lucien Blandenier

Ok ! Nice ! I forget to check in the 2.6 version...
