QGIS Application - Feature request #1223
cannot remove islands from multipolygons

2008-08-20 06:16 AM - Maciej Sieczka -

Status:	Closed			
Priority:	Low			
Assignee:	nobody -			
Category:	Digitising			
Pull Request or Patch supplied:			**Resolution:**	duplicate
Easy fix?:	No		**Copied to github as #:**	11283

Description

1. Open the attached Shapefile.

2. Toggle editing.

3. Navigate to top-left corner.

4. You can't remove any of the separate polygons cause all have the same id - you can only remove all polygons (i.e. the entire geometry in the Shapefile) or none.

QGIS should let the user modify Shapefile's geometry independent of it's data table linkage.

History

Looks like there's only one feature in you shape and that feature is a multipolygon. The problem is that there currently is no way to delete islands from a multipolygon.

> *duplicate of #1042*

Not entirely - #1042 is about **islands**, this one one is about **rings**. Enough to re-open this ticket?
