

QGIS Application - Bug report #12322

load tif/tfw layer with rotation terms

2015-03-05 09:18 AM - Otto Dassau

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Rasters	
Affected QGIS version:	2.8.1	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: duplicate
Crashes QGIS or corrupts data:	No	Copied to github as #: 20500
Description		
<p>Hi,</p> <p>when I load a tif with worldfile and the 2nd and 3rd row (rotation terms) is not 0, QGIS is not able to put the layer to the right position. I also tested with QGIS Version 2.6.1 and there it works.</p> <p>With this tfw file the layer is not shown at the correct position:</p> <p>0.317133539233554 -0.012952088380440 -0.012952088380440 -0.317133539233554 386370.45256274 5674529.73223443</p> <p>With this tfw file the layer is shown at the correct position but the rotation is missing.</p> <p>0.317136839634324 0.000000000000000 0.000000000000000 -0.317136839634324 384372.80934352 5674611.33286690</p> <p>Thanks a lot Otto</p>
