<b>Category:</b> Symbology	
<b>Pull Request or Patch supplied:</b>	<b>Resolution:</b>
<b>Easy fix?:</b> No	<b>Copied to github as #:</b> 20504
<b>Description</b>	
<p>Since it is impossible to copy and paste styles from different geometry layers (so from a polygon to a point for example) it would be nice to export just the values of the symbology.</p> <p>As a short example: one has a polygon layer with a customized graduated scale (each value has been added manually) and another point layer with a similar attribute table (field name of classification are the same).</p> <p>It would be nice to be able to export the customized values from the polygon to the point.</p>
