Pull Request or Patch supplied: Resolution: up/downstream

Copied to github as #: 20535

Easy fix?: Description

Installation of h5py is very problematic, especially for fresh QGIS users. Adding it to the official distribution would save them a lot of troubles.

The h5py (http://h5py.org) package is a Pythonic interface to the HDF5 binary data format. It lets you store huge amounts of numerical data, and easily manipulate that data from NumPy (requires NumPy 1.6.1 or newer).

The h5py package is required by RiverGIS QGIS plugin (http://rivergis.com).

Thanks a lot in advance!
