QGIS Application - Bug report #12589

Choose which fields are joined behaves wrongly when the target field is also selected

2015-04-17 02:17 AM - Giovanni Allegri

Status: Closed Priority: High

Assignee:

Category: Vectors

Affected QGIS version: 2.8.1Regression?:NoOperating System:Easy fix?:No

Pull Request or Patch supplied: Resolution:

Crashes QGIS or corrupts data: Copied to github as #: 20713

Description

If the target vector is selected from the fields to be joined, it isn't added in the headers but the field contents are shifted one column. e.g. if my target field is FIELD_1 and I choose as joined fields FIELD_1 and FIELD_2 I obtain a FIELD_2 header containing the FIELD_1 values.

If I select more fields the problem has a cascading effect on the other fields too.

I haven't a patch yet but the problem can be easily solved removing the target layer from the layers list here: https://github.com/ggis/QGIS/blob/master/src/app/ggsjoindialog.cpp#L141
