

QGIS Application - Bug report #12695

GDAL Rasterize does not rasterize vectors with field 0

2015-05-04 12:39 PM - Paolo Cavallini

Status:	Closed	
Priority:	Normal	
Assignee:	Giovanni Manghi	
Category:	Processing/GDAL	
Affected QGIS version:	2.8.1	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed/implemented
Crashes QGIS or corrupts data:		Copied to github as #: 20801
Description		
All records are rasterized, except those with value of the selected field = 0. This seems inappropriate

Cannot confirm on qgis master. Please attach sample data.

#2 - 2015-05-04 10:14 PM - Paolo Cavallini

Done with the basins from exercise data.
Thanks.

Thanks.

if you mean the training manual exercise data then I cannot see any "basins" layer. Better attach the data is giving you problems.

I tested on both QGIS master and 2.8.1 on both Linux and Windows and in all cases, with the provided vector, there are no issues and the polygon with attribute = 0 are correctly rasterized to pixels with value = 0.

If you use the tool and choose "byte" as type for output you must pay attention to the value used for nodata, as -9999 cannot fit in such type and so it is automatically changed to 0.

#6 - 2015-05-07 01:47 AM - Paolo Cavallini

Got it, thanks. Perhaps a better default could be chosen for nulls?

#7 - 2015-05-07 02:05 AM - Giovanni Manghi

maybe is better to change the default type to int16?

#8 - 2015-05-07 09:16 AM - Paolo Cavallini

Fixed with commit:fb141e76feb45ee544136b78b356d55e6b19b587

Thanks.
