### Description

Hello everybody,

I come back to you

I went to [georezo](#) and they confirmed that there is a bug!

First sorry for my english, it's a little bad. I'll try to explain my problem in english but i put a french explanation under the english version!^^

I use QGIS mac before 2.6 and the problem was there. Now, i install the version 2.8 to see if the problem was resolved on this version but the problem is always there!

When i make a print composer, i have a problem with the map:

I crate a new map, ok i see it. I add grid and ok no problem, it post up it. But when i want to add a framework (inside, outside, zebra,...) there is a problem and it doesn't make it. It's the same when i ask to add coordinates (around the picture, the position of each grid).

But when i export my project to PDF, i see the project correctly?! :/

My teacher, which use all the time QGIS, look for but he never see that. He asked to a another guy which is really "strong" in QGIS and he didn't know too.

Finally, Santanna said: "I confirm that the problem is only on Mac OS X. There is no problem on Windows. He add that there is no problem with the version Mac OS X 2.4."

I joint you some picture to show you the problem:

A capture to show you what i see.

All of my settings:

<http://imagizer.imageshack.us/v2/731x457q90/540/jIUMh8.png>

When I export to PDF

<http://imagizer.imageshack.us/v2/731x457q90/633/eqkI3T.png>

Thanks for you answer.

T.D.

--

Bonjour,

Je reviens vers vous: je suis allé sur le site géorézo et on me confirme qu'il y a bien un bug:

J'utilise QGIS mac précédemment la version 2.6.1 et le bug était présent. Je viens de passer à la version 2.8.1 pour voir si le bug avait été réparé mais il persiste toujours.

lorsque je réalise une composition, j'ai un problème avec la carte.

En effet, je vais dans gaticule et j'ajoute une grille. ok pas de problème, il l'affiche. Mais, lorsque je veux mettre un cadre, il ne l'affiche pas (à l'intérieur, à l'extérieure, en zébré,...).

Il en va de même pour l'affichage des coordonnées qu'il ne veut pas mettre.

mais, lorsque j'exporte le projet sous forme PDF, il me l'affiche correctement! :/

Mon prof, qui utilise très souvent QGIS donc il s'y connaît quand même, à regardé et il a dit qu'il n'avait jamais vu ça. Il a également demandé à un collègue qui est "calé" quand à l'utilisation de QGIS et il ne sait pas non plus.

Finalement, Santana me dit: "je confirme le bug sous MacOS X. Avec ces paramètres, ça apparaît nickel sous Windows mais pas de cadre zébré ni de coordonnées sous OS X."

Quelques photo pour vous illustrer le problème:

Une capture d'écran pour vous montrer ce que je vois:

<http://imagizer.imageshack.us/v2/731x457q90/673/2omBQs.png>

Mes différents paramètres

<http://imagizer.imageshack.us/v2/731x457q90/540/jlUMh8.png>

Lorsque j'exporte au format PDF

<http://imagizer.imageshack.us/v2/731x457q90/633/eqkI3T.png>

Merci d'avance pour votre réponse.

T.D.

hi,

Giovanni, I read that an issue is tagged as blocker if the feature has ever worked in a previous release. In Os X QGIS2.4, the frame style (only zebra was available though) was displayed as expected and so were the coordinates.

If none of these options worked with 2.8, shouldn't it be tagged "Blocker"?

**#6 - 2015-05-23 10:42 AM - Rhenriques Henriques**

Hi

I also agree that this bug should be considered as blocker. It's very annoying to go to another software to be able to produce a simple coordinate grid. This was working fine under version 2.4.

Cheers

Unfortunately I don't think this is something we're able to fix within QGIS itself - it seems to be a quirk with the Qt libraries and current versions of OSX.

Feedback from an experienced OSX Qt developer would be appreciated...

**#8 - 2015-05-28 04:54 AM - Nyal Dawson**

- Status changed from *Open* to *Feedback*

Please test with latest master build and confirm whether the fix works...

- File *qgis\_version.png* added

Hello,

Sorry for this late answer but i finish a big project QGIS for the end of my year and I was waiting the dateline to try the next version.

So now i install the next version QGIS 2-8-2 and it don't work again! :/

l'ts always the same probleme I see the grids and frames when i export to PDF but i' can't see it when i work on the print composer...

Thank you

**#10 - 2015-06-11 05:13 AM - Giovanni Manghi**

| *So now i install the next version QGIS 2-8-2 and it don't work again! :/*

the eventual fix is available in qgis master (the future 2.10) not 2.8.2.

**#11 - 2015-06-11 05:55 AM - delinte thibault**

Ohw! :o

OK, Sorry! ;)

I wait and i'll try with the 2.10 version when it come out! ^^ ;)

**#12 - 2015-08-09 01:55 PM - Nyall Dawson**

- *Resolution set to fixed/implemented*

- *Status changed from Feedback to Closed*
