Category:	Labelling	
Affected QGIS version:	2.8.2	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 20849
Description Return within a string and the option to replace a character (typically space) with return do not interact nicely (the return within a string not being used). More details: <ul style="list-style-type: none">- if the return and the wrap character are in the same string, the return is not taken into account, it becomes a simple space;- if the wrap character appears before the return, even in a separate string, the return is not taken into account, it becomes a simple space.- Only returns written before a wrap character, in a separate string, are applied. Thanks DelazJ.
