<b>Crashes QGIS or corrupts data:</b>	Yes	<b>Copied to github as #:</b> 20859
<b>Description</b>		
<p>I am using Qgis 2.8.1 64-bit (Standalone installer) on Windows 7 64-bit. In the OSGeo4W Shell I am encountering a problem with some gdal/ogr python scripts where python.exe crashes upon script termination.</p> <p>The problem seems to be restricted to gdal2tiles and gdal_calc, I have done some quick testing and the problem doesn't seem to exist for other scripts.</p> <p>This issue has been brought up earlier on gis.stackexchange.com</p> <p><a href="http://gis.stackexchange.com/questions/101921/gdal-calc-works-but-i-get-a-python-error-at-the-end-of-each-process-that-prevent">http://gis.stackexchange.com/questions/101921/gdal-calc-works-but-i-get-a-python-error-at-the-end-of-each-process-that-prevent</a></p> <p>System information: Path in OSGeo4W Shell:</p> <p>C:\PROGRA~1\QGISWI~1\apps\Python27\Scripts;C:\PROGRA~1\QGISWI~1\bin;C:\Windows\system32;C:\Windows;C:\Windows\WBem; C:\PROGRA~1\QGISWI~1\apps\msys\bin</p> <p>pythonhome:</p> <p>C:\PROGRA~1\QGISWI~1\apps\Python27</p> <p>gdal_data:</p> <p>C:\PROGRA~1\QGISWI~1\share\gdal</p>		

History

#1 - 2015-05-21 12:58 AM - Giovanni Manghi

- Resolution set to fixed/implemented
- Status changed from Open to Closed

there are indeed issues with gdal lately (I have seen then also on linux), but this is not caused by qgis.
