Description

After being driven to madness by ubuntu unity's poor window focus management, I've decided to switch to Gnome Shell 3.16. I spotted a significant UI problem under gnome shell's default gtk theme (Adwaita), whereas the toolbar buttons of panels (layers panel, browser panel, etc.) are way too big. See attached screenshot "icon-oversized.png".

It's also affecting the effect button in the layer property's symbology pane.

The version of gnome shell I'm running is from ubuntu's gnome-staging PPA, but I'm assuming things look as unwelcoming under Fedora.

I should say that I set my toolbar button to 16px.

The proper fix here should probably be for the dockable panel toolbar's button to respect the toolbar button size set in QGIS' preference.

#2 - 2015-05-27 06:45 AM - Mathieu Pellerin - nIRV

- Status changed from Open to Closed

Fixed in changeset commit:"a0a1cea0e17b09264c60ba0d1d29560013ca060f".
