Description

It seems like a recent master version (commit:b91e43a) crashes on exit. Installed through OSGeo4W.

I also tried with --noplugins to make sure none of the plugins is causing the crash.

I don't know which category I should assign.

Ubuntu doesn't seem to be affected by this problem.

A simple open and close is sufficient to trigger the crash. Not even a project has to be loaded.
