- Crashes QGIS or corrupts data changed from No to Yes
- Category set to Web Services clients/WMS
- Status changed from Open to Feedback
- Priority changed from Normal to High
- Target version set to Future Release - High Priority

I cannot confirm with WMS servers (QGIS Server, Mapserver) protected with the Apache authentication. Could you provide a URL? A console error message?

try <http://demo.geonode.org/geoserver/ows> as WMS server

enter some credentials. Quit QGIS. Start QGIS --> Crash

Only remedy is manually editing the qgis.conf file and correcting removing the info for that url
