QGIS Application - Bug report #12832
2.8.2 Hard Crash - OS X.10.3

2015-05-27 06:55 AM - Mars Sjoden

Status:	Closed		
Priority:	High		
Assignee:			
Category:			
Affected QGIS version:	2.8.2	**Regression?:**	No
Operating System:	OsX	**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	not reproducable
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	20927

Description

Recently installed Williams latest QGIS build along with his latest frameworks.

Running a Mac 10.10.3

QGIS 2.8.2 hard crashes quite often and randomly whenever creating or editing a feature.

Sometimes a drop down sheet will very briefly appear with " Indexing data... " just before the crash, although often QGIS simply flashes out of existence.

Trying to work out the specific conditions.

After a few more hours using QGIS it appears that once I save my QGIS project the crashing ensues.

Been working for a couple hours digitizing polygon boundaries over an OpenLayers Google and Bing sat imagery and no crashing as long as I do not save the **project.qgs**.

As soon as I save to a project.qgs, at some point **poof** bye bye QGIS and work.

#2 - 2015-05-29 07:15 AM - Giovanni Manghi

- Status changed from Open to Feedback

- Operating System set to OsX

- Crashes QGIS or corrupts data changed from No to Yes

Did it happened in previous qgis releases?

#3 - 2015-05-29 07:18 AM - Mars Sjoden

Not this particular bug that I know of.

please try also disabling/removing all 4rd party plugins, a few ones are known to cause problems. The easiest way is to backup/delete .qgis2 and restart qgis. Thanks.

I forgot to note that I am only running the Vanilla System from Williams packages.

The first time around I deleted QGIS 2.8.2 and reinstalled.

Have not updated plugins also as per Williams warning.

I can do another fresh install, but I am currently digitizing, (fingers crossed, not saving project)

#6 - 2015-05-31 12:16 PM - Mars Sjoden

I have tried using QGIS 2.8.2 for the past 7 days or more. I have tried not saving the project file or loading a qgs project file and while this does seem to stabilize the app for a longer time, eventially QGIS simple hard crashes.

Is there a way to find or use a stable version of QGIS for OS X? I would like to use QGIS but continuous random crashes are very discouraging for getting work done.

Thank you.

Mars

have you tested deleting .qgis2?

#8 - 2015-05-31 02:55 PM - Mars Sjoden

Yes, I have deleted the hidden .qgis2 directory a couple times.

I am using Larry Shaffer's Latest Nightly Build (Dakota Cartography) for the last hour+ and seems to be working fine so far (fingers crossed)

I assume that with master is ok. Please reopen if necessary.
