

QGIS Application - Bug report #12918

QGIS freezes when wheelzooming WMS layer via authenticating proxy

2015-06-09 02:58 AM - johanvdw -

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Map Canvas	
Affected QGIS version:	2.8.2	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 21003
Description		
<p>Note that this issue is very similar to a bug which was reported on the mailinglist (I have not found it in trac): http://lists.osgeo.org/pipermail/qgis-developer/2015-May/037744.html</p> <p>When using the wheelmouse to zoom in qgis and an authenticating proxy is used, qgis freezes and must be killed. When using a non-authenticating proxy such as cntlm the problem does not occur.</p> <p>Tested on windows. This affects at least versions 2.6 and 2.8.2</p>		

History

- *Crashes QGIS or corrupts data changed from No to Yes*
- *Priority changed from Normal to High*
- *Status changed from Open to Feedback*
- *Category set to Map Canvas*

Hi, is this still an issue in latest qgis releases as 2.18.4 or qgis3/master?
