

QGIS Application - Feature request #12958

Add Radio buttons or "option row" to the list of available widgets for forms

2015-06-13 03:00 PM - Stefan Blumentrath

Status:	Open	Resolution: Copied to github as #: 21037
Priority:	Normal	
Assignee:		
Category:	Edit widget	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>The ability to use radio buttons or an "option row" (like in IntraMaps.Roam) for relatively short lists in forms could save the user a click (plus scrolling) and is probably the most efficient means of entering such data. Would be nice to have it in QGIS (without the need to use QtDesigner).</p>

Should that be a configuration option for ValueMap (and ValueRelation)?

#3 - 2015-06-14 01:31 PM - Stefan Blumentrath

Yes, that is exactly what I had in mind. In cases where one has not too many options for values for an attribute (let's say 3 to 7, maybe 9 alternatives, e.g. 'good', 'normal', 'bad'), such attributes could be entered at one click... It would not make much sense for long lists of course...

I just saw that "Value Relation" already has something in this direction, when "Allow multiple selections" is activated...
