QGIS Application - Bug report #13000
composer legend item clips layer symbols with layer-wide transparency > 0%

2015-06-18 05:39 PM - Mathieu Pellerin - nIRV

Status:	Closed		
Priority:	Normal

Affected QGIS version:	master	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:	No	**Resolution:**	end of life
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	21077

Description

The composer legend item currently clips polygon layer's symbols with large border width when the layer has layer-wide transparency applied to it.

Steps to reproduce:

1. Create a new project, and add a polygon layer
2. Edit the layer's symbology to have the polygon border width use a large value (7 mm, for example)
3. Duplicate the layer, and edit the duplicated layer's layer-wide transparency level to be greater than zero
4. Create a composer, and add a legend item
5. Take note of the clipping occurring with the duplicated layer with transparency, against the non-transparent layer featuring the same symbology

I'm attaching a small test project that shows the issue too.
