QGIS Application - Bug report #13013 Custom function accepted in 2.8 is invalid in Master

2015-06-20 09:28 AM - Harrissou Santanna

Status:	Closed		
Priority:	High		
Assignee:			
Category:			
Affected QGIS version:master		Regression?:	No
Operating System:		Easy fix?:	No
		Resolution:	
<u>-</u>		Copied to github as #: 21089	
Description			
I have created a custom function (\$compta) within the new Function Editor in QGIS 2.8. @qgsfunction(args=0, group='Custom') def compta(value1, feature, parent):			
nb = 0 for idx in range(len(attr = feature.attr if not attr == NUI nb = nb +1 return nb	**-		
In master, when tring to use this function, I get an error			
Parser Error:			
Special column is not known			
Eval Error:			
No root node! Parsing failed?			

History

it is occurring because you are running the function from Recent list which has stored it with the \$ char in 2.8 version. in master version that char is not added to the function anymore (it was removed since commit:e6403da)

the workaround here is re-run the function and choose it from Custom list.

- Status changed from Open to Closed

Thank you, Salvatore. I didn't see that change.
