<b>Description</b>		
<p>For a point symbol data it seems like the following basic shapes are not correctly exported:</p> <ul style="list-style-type: none"><li>- equilateral triangle (no symbol exported in DXF)</li><li>- triangle (invalid export, triangle not correctly closed, sometimes results in very long artefact lines towards point 0/0)</li><li>- filled arrowhead: stroke not correctly exported (only fill appears)</li><li>- star: (no symbol exported in DXF)</li><li>- regular star: (no symbol exported in DXF)</li><li>- diamond (sames situation like triangle, see above)</li><li>- arrow (no symbol exported in DXF)</li><li>- pentagon (no symbol exported in DXF)</li></ul> <p>See attached a project with a Shapefile where each symbol is used and the resulting DXF with the invalid symbols exported.</p> <p>You can test with the layer "Simple Markers Categorized".</p>
