QGIS Application - Bug report #13130
"Zoom last" zooms to last zoom level but centers around current center

2015-07-19 11:38 PM - Casper Børgesen

Status:	Closed		
Priority:	Normal

Affected QGIS version:	master	**Regression?:**	No
Operating System:	windows	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	duplicate
Crashes QGIS or corrupts data:		**Copied to github as #:**	21194

Description

The Zoom last functionality seems to haved changed.

Situation A:

I have a view of the entire area.

Situation B:

I have zoomed into a small area close to the edge of the bounding box of A.

Situation C:

I have used Zoom last to go back to A.

Result:

I have the zoom level of A but the bounding box is centered around the bounding box of B. I would expect the bounding box to be equal to that of A, which was the behavior of 2.10 and below.
