Category:	Map Composer/Printing			
Affected QGIS version:	2.8.2		**Regression?:**	No
Operating System:	Mac		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	duplicate
Crashes QGIS or corrupts data:	No		**Copied to github as #:**	21206

Description

Newly installed QGIS 2.8.2 on laptop running Mac OS 10.10.2. Created 5-layer map. Composed layout with legend, label in Composer. When attempting to export PDF, saw brief flash where "export" box should have been; no export occurred. Repeated attempts to quit, re-start over past two days. One successful export of JPEG after many failures. Also tried, failed to print to paper.

With older versions of QGIS, I have been able to print to paper, to PDF and to JPEG.

Coukd you attach the a sample project and data? Does the issue persist on 2.10? have you tried without any 3rd party plugin active? Have you tried by (temporarily) purging the .qgis2 folder?

#2 - 2015-09-08 08:45 PM - Miguel Martinez Soler

Actually it won't export an image neither. I found the same issue on 2.10.

It seems its related to the HTML rendering of labels. I've recorded a screencast that can be seen at https://youtu.be/C2QZX9iSYe8
If I uncheck the "Render as HTML" option, everything works ok. The exporting dialog does work actually from time to time, even if I use HTML rendering.

I'll check this again on 2.10 and upload a video later.
