

QGIS Application - Bug report #13160

Web menu inkl. OpenLayers plugin is hidden in QGIS 2.10.1-Pisa when many plugins are activated

2015-07-27 08:36 AM - Tobias Preuss

Status:	Closed	
Priority:	Normal	
Assignee:	Etienne Tourigny	
Category:	Python plugins	
Affected QGIS version:	2.10.0	Regression?: No
Operating System:	Ubuntu	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 21223
Description		
Problem		
I noticed that the menu item Web disappears when many plugins are installed and activated. In my case I was searching for the OpenLayers entry but I could not find the Web menu at all.		
Workaround		
After some experiments I noticed that I can restore the Web menu when I disable most of the other plugins.		

History

#1 - 2015-07-30 05:21 AM - Tobias Preuss

- Assignee set to Etienne Tourigny

I figured out that the problem can be reproduced even when QuickOSM is the only activated plugin. You have to restart QGIS once after you deactivated all plugins except QuickOSM. Then when QGIS is restarted the "Web" menu item is gone.

#2 - 2015-07-30 02:06 PM - Giovanni Manghi

- Resolution set to invalid

- Status changed from Open to Closed

So it seems an issue caused by the quickosm plugin... file the ticket in the proper tracker

<https://github.com/3liz/QuickOSM/issues>

thanks!

@Giovanni: Thank you for the link.

I reported the bug here: [Web menu is hidden in QGIS 2.10.1-Pisa when QuickOSM is activated](#)
