Pull Request or Patch supplied:		**Resolution:**	
Easy fix?:	No	**Copied to github as #:**	21241

Description

It would be super handy if you could include all layers from an embedded project without having to supply the name of the layers. A kind of SELECT * but for all groups and layers. This would be handy when making a parent project that you can just update to add new layers to child projects e.g base layers project.
