| Easy fix?: | No | |
| Description | | |
| <p>The current georeferencer plugin does not allow to enter a custom value for no-data pixel. There is just a flag to "use 0 for transparency when needed" but this is not very useful if you have black (0 valued) pixels in your raster image.</p> <p>Following the instructions by user30184 here: http://gis.stackexchange.com/questions/110379/how-to-avoid-random-transparent-pixels-in-georeferenced-grayscale-raster-images I was able to add transparency to georeferenced images, but the command can be run only on terminal.</p> <p>It would be useful to have this option added in the settings window.</p> | | |
