

QGIS Application - Bug report #13227

OS X homebrew install fail

2015-08-18 08:56 AM - John Tull

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Build/Install	
Affected QGIS version:	master	Regression?: No
Operating System:	OS X	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution:
Crashes QGIS or corrupts data:	No	Copied to github as #: 21288
Description		
<p>For the past month or so, QGIS trunk has been able to successfully build on my homebrew build system, but it fails in the install portion of the process. I've uploaded a partial build log (head to 11% and tail from 92%):</p> <p>https://gist.github.com/jctull/6261d7788e5218753cfb</p> <p>It is unclear if this is an issue with something in the install script or if it is a problem with my build environment.</p>		

History

- Status changed from Open to Closed

Install worked fine outside of homebrew using homebrew installed dependencies. Closing this here, will move to osgeo4mac homebrew repo as issue in the qgis formula.
