Description

Dear All,

I think this issue is still related to issue #12098.
Besides the warning about "on the fly reprojection", I think it's more valuable if at the Scale bar properties in Map Composer, also provided the option to set the CRS.
It's will be implemented if a user wants to create a map template, and set the CRS in projection coordinate system in order to easily set the scale bar in metric, the user can use this feature.
And also when the user saves the template, the properties from the scale bar is include of the template.

Thank you
