QGIS Application - Feature request #13283
Relative paths to files and photos

Description

Although there is a setting in the project properties stating that relative paths must be used, it is not possible for photos or files, like in the forms widgets.

This is not consistent (relative paths can be used for resources like svg's for example) and seems to be a rather common problem in QGis, according to other open tickets. This is especially a difficulty when sharing a project between several users.

Isn't this fixed witj new editing widgets?

#2 - 2016-05-24 07:50 AM - didier peeters

I guess it is; I briefly checked recently with 2.14.2 on a Mac but although the relative path was stored by the widget I could not visualize the linked photo in the form. Since I didn't have time to investigate further I haven't reacted yet.

#3 - 2016-05-24 08:00 AM - Paolo Cavallini

I also had trouble with the new widget. This would be a different ticket however.
