Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	21385

Description

Hi,

QGIS master win32 crashes on exit. To reproduce, just start QGIS nightly and then close. It will create minidump.

I was able to trace this issue to "globe" plugin. (globeplugin.dll).
If it is not checked in plugin list, program exits normally.

Sorry for reporting it here; apparently there is no project for globe plugin, and I even can't find it on plugin web site.

Best Regards,
Mikhail

History

#1 - 2015-09-08 12:09 PM - Mikhail Tchernychev

Update: this did not happen with QGIS 2.10 (released)

#2 - 2015-09-09 12:14 PM - Mikhail Tchernychev

- Operating System changed from win32 to win32, Linux

Updated: the same happens under Linux 32 bit

- Status changed from Open to Feedback

Can you disable the plugins and try again (by renaming .qgis2 under user folder)?
Also, could you disable globe plugin?
