

QGIS Application - Bug report #13338

problems with the style of simple markers in pointlayers in QGIS 2.10 (Pisa) for OSX Useres

2015-09-10 03:21 AM - Marcel Stadelmann

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	OsX UI	
Affected QGIS version:	2.10.1	Regression?: No
Operating System:	OSX	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	No	Copied to github as #: 21391
Description		
<p>In QGIS 2.10.1 the styles of simple markers in pointlayers can't be changed anymore. For example it isn't possible to change the frame/border color of a point symbol. It appears just a text: "Dieser Layer hat keine änderbaren Eigenschaften" (in english something like: This Layer has no changeable characteristics).</p>

Could you test in QGIS master?

#2 - 2015-09-12 02:06 AM - Saber Razmjooei

- Status changed from Open to Feedback

- File Screenshot.png added

This issue still exists with Master (QGIS 2.11 downloaded 7 October 15 from Dakota Carto) on Lion 10.7.5 : unable to stylize vector layer.

Thanks

- Target version set to Version 2.12

#5 - 2015-10-08 05:25 AM - Nyall Dawson

Can you try removing (or renaming) your .qgis2 preferences folder and retest? It's possible this is caused by a bad plugin.

#6 - 2015-10-08 07:17 AM - Julien Iwema

Thank you.

I have removed the files located here :

Users/julien/Library/Preferences/org.qgis.QGIS2.plist

Users/julien/Library/Preferences/org.qgis.QGIS2.plist.lockfile

and I still cannot modify style of vector layers.

#7 - 2015-10-09 03:53 PM - Larry Shaffer

Hi Julien,

The folder Nyall was referring to is located at ~/.qgis2, but because it is prefixed with a '.' it is not visible by default in the Finder. You can rename it temporarily by issuing the following commands in Terminal (*first ensure QGIS is not running*):

```
mv ~/.qgis2 ~/.qgis2_off
```

Then relaunch QGIS. This will create a new, fresh folder at ~/.qgis2, which will be devoid of any previous (possibly problematic) plugins you may have installed.

To restore the older renamed folder after testing, do (*first ensure QGIS is not running*):

```
mv ~/.qgis2 ~/.qgis2_test
mv ~/.qgis2_off ~/.qgis2
```

Hi Larry,
Thank you for your answer. I've tried to rename the folder and I think it did work well (it has removed the plugins). But sadly it didn't fix the vector issue. Do you know if we are only a few of mac users encountering this issue (maybe because of particular settings) or if it can be a "compatibility issue" with some versions of OS X ?
Thanks again

#9 - 2015-10-12 03:06 PM - Larry Shaffer

Hmm. I am not able to reproduce this with latest Mac nightly on 10.9 or 10.10 using a blank project and loading a Natural Earth places point layer.

Can anyone who is seeing this error share a stripped-down project and data file?

#10 - 2015-11-07 11:26 AM - Giovanni Manghi
- Target version deleted (Version 2.12)

#11 - 2015-12-21 12:48 PM - Giovanni Manghi
- Resolution set to not reproducible
- Status changed from Feedback to Closed

likely a local issue(?), please reopen if necessary.
