I don't use.

Works OK for me with QGIS 2.10.1 on Windows. I edited the csv file to have headers only once, checked the First record has field names option because obviously that is the case. Ask to discard zero lines and press OK. Select the CRS and points appear on the map with attribute names and attribute values in the table. See attached image which shows my options.

REady FIX this

This is my case: attach two image to see the problem (before).

I fix this deleting the config in /home/user/.qgis2 anf /home/user/.config/QGIS

Thank Very much
