<b>Affected QGIS version:</b>	2.10.1	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b> worksforme
<b>Crashes QGIS or corrupts data:</b>	Yes	<b>Copied to github as #:</b> 21428
<b>Description</b>		
<p>I'm a new user of QGIS. I need to make a heatmap for my thesis and I'm fairly certain I downloaded and set up the program correctly. I imported the points and selected the heatmap plugin. After selecting the options I wanted (I'm new at heatmaps, maybe I wasn't doing something right), I clicked ok and the whole program crashed. I could copy and paste the error codes my Mac listed if that can help identify the problem.</p>

- File QIS\_crash\_log.rtf added

Attached is the crashlog.

#2 - 2015-09-27 10:11 AM - Saber Razmjooei

- Resolution set to worksforme

- Status changed from Open to Closed

Works for me. Your other alternative is to use Heatmap style:

[www.youtube.com/watch?v=-F9n0wb8rkQ](http://www.youtube.com/watch?v=-F9n0wb8rkQ)

I'd suggest reading the manual or contacting the mailing list if you have problems using the software.
