Pull Request or Patch supplied:		**Resolution:**	duplicate	
Crashes QGIS or corrupts data:		**Copied to github as #:**	21478	

Description

Hi people,
I use QGIS 2.10.1

Since a few years I have to record the landuse for an area. As the areas don't change much I have just archived the shape file from the previous year with a different filename. Afterwards I marked the indiviual features and updated the current use in the attribute table. In case of geometry changes I used "split feature" or "merge feature".

Until now that worked flawlessly!

now I find that after enabling "show feature count" in the legend, that the display feature number is wrong (for 107 "real" features, I get 138). Moreover the polygons change despite multiple saves, without user input.

With 2.2 there are no similar observations.

See also https://lists.fossgis.de/pipermail/fossgis-talk-liste/2015-September/007427.html ff (in German)

I'm a pure use, without the know necessary to solve this.

Alexander
