<b>Description</b>		
<p>For a layer with a complex classification, unselecting the whole layer in the legend leaves all the classes selected, but not visible on the canvas. To show only a few of them, I need to unselect each of them, which is boring.</p> <p>It would be good to add the possibility to check and uncheck all the classes, and only the selected ones.</p>

[FEATURE] Add a show/hide all context menu for layer tree symbol items

Allows toggling on/off all the symbol items for categorized/graduated/rule based layers via the right click menu on an item. Previously you'd have to manually toggle each item one-by-one.

Yes, you're right. Feel free to merge the two - I think there is some additional info here.
