<b>Description</b>			
<p>Hi.</p> <p>I have a shape file of UK postcodes and I wanted to create UK Sectors from it.</p> <p>I have used the function "Vector/Geo Processing Tools/Dissolve" in QGIS 2.8 (Wien) and it worked.</p> <p>I have used the same UK postcode shape file, same function, but with QGIS 2.10.1 (Pisa) the process fails.</p> <p>What happens is that the process reach 100%, but the layer is not added to the current project, even if that option is selected.</p> <p>If I close QGIS and open it again, if I add the new layer (shape file) the map is completely blank.</p> <p>Note that the shape file is small 27M in comparison with the file created using QGIS 2.8 (128M).</p> <p>I have installed both software on the same machine (Win 7 64 bit), they are both 64 bit version.</p> <p>Has anything changed between those 2 versions in regard to Vector/Dissolve?</p>
