Priority:	Normal			
Assignee:				
Category:				
Affected QGIS version:	master	**Regression?:**	No	
Operating System:	Ubuntu	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:		**Copied to github as #:**	21530	

Description

Ubuntu Vivid, qgis master from debian-nightly. The qgis.desktop file (attached) wants to execute /usr/share/qgis:

TryExec=/usr/bin/qgis
Exec=/usr/bin/qgis %F

But this won't work:

    user@host:~$ ls /usr/bin/qgis
    bash: /usr/bin/qgis: No existe el archivo o el directorio
    user@host:~$

(translation: The file or directory does not exist)

Actually there's no /usr/bin/qgis, there's a qgis.bin instead:

    user@host:~$ ls /usr/bin/qgis*
    /usr/bin/qgis.bin
    user@host:~$

Synaptic reports that /usr/bin/qgis has been installed though (I guess I can get the same piece of information from dpkg or apt-get but I am not familiar with the syntax). I would say this is a packaging issue but I can't find a category for that. Priority could be low --the program works, as long as you execute the right binary or blocker --the average Joebuntu could be unable to launch the program.

Might be related to #13310 (the diversion thing). There's also a similar issue with the standalone browser.
