| Affected QGIS version: | master | Regression?: No |
| Operating System: | Ubuntu Linux | Easy fix?: No |
| Pull Request or Patch supplied: | No | Resolution: |
| Crashes QGIS or corrupts data: | No | Copied to github as #: 21538 |
| Description | | |
| <p>Just updated QGIS Master 2.11</p> <p>Grass 7 is active under options under the processing toolbox. Grass 64 isn't.</p> <p>I'm getting an error when starting a tool saying GRASS GIS 7 cannot be found. I started qgis from a console and QGIS isn't complaining - in fact it seems to see grass as it's setting things like g.proj and g.region. Anyway - thoughts or ideas. I think this is correct as I can't think of anything else to check/uncheck.</p> <p>...and Grass 7.01 is installed along with qgis-plugins-grass</p> | | |

History

#1 - 2015-10-08 05:24 AM - Randal Hale

I did an update still wasn't working. I inadvertently (and I have no clue why I did this) deleted my .qgis2 file and it works. Grass is now found by QGIS 2.11 Master

#2 - 2015-11-07 11:26 AM - Giovanni Manghi

- Target version deleted (Version 2.12)

#3 - 2015-11-08 05:59 AM - Randal Hale

- Status changed from Open to Closed

It's working now - seems generating a new .gis2 file fixed it. Unfortunately I didn't keep my old .qgis2 file.
