QGIS Application - Bug report #13516
Problem with global variable and QgisRelationEditorWidget

2015-10-05 03:07 AM - Luca Lanteri

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Forms			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	end of life	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	21560	

Description

I have a 3 level nested form (granparent,parent and child).

If I don't use global variables when I select a record in child to parent and then one in parent, QGIS raise an error [0].

to avoid this error I have to declare some variable as global in my parent form but then I have a minidump error when insert new records, because as Matthias said in list there are some problem with custom and global variable.
