

QGIS Application - Bug report #13525

QgisRelationEditorWidget in custom form emits duplicate signals

2015-10-05 11:25 PM - Luca Lanteri

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Forms	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: invalid
Crashes QGIS or corrupts data:	No	Copied to github as #: 21568
Description		
when QgisRelationEditorWidget is used into a custom form it seems that some signals are emitted once for each record in the child layer.

Can you clarify "some signals"?

#2 - 2015-10-14 11:47 PM - Luca Lanteri

- File foto.zip added

- File 2015-10-15_084422.jpg added

Due to my lack of python knowledge I'm no really sure how to describe the issue in detail and if it's really connected to signals.

I attach some test data.

If I open my form and I push one of the two buttons all works fine, but when I use the form in the "table form view" when I push the buttons the dialog is opened more than one time.

The number of time increases when there are more features in the layer.

Same thing happened when I put my form into a QgisRelationEditorWidget.

I'm a python newbie so may be the code in the form can be not correct.

#3 - 2015-12-20 10:13 AM - Giovanni Manghi

- Resolution set to invalid

- Status changed from Feedback to Closed

so, in this case shouldn't this more suited for a question in the developers mailing list rather than assuming that is a bug in QGIS? Please reopen if necessary (ie, after asking and getting an answer a issue is confirmed). Thanks!
