<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 11413
<b>Description</b>		
<p>I opened a freshly downloaded file of the Bushkill quadrangle DLG in SDTS format. Nothing shows on the screen, even after working with projection information.</p> <p>Also, very large shape files, such as the new TIGER/Line shapefiles install, but bog the system down so much that I had to force kill the program.</p>

Hi,  
I just tested a dlg/sdts downloaded from here

<http://edc2.usgs.gov/geodata/index.php>

and everything seems fine under qgis > 1.1 under Ubuntu 9.04.

Also I have noticed no problems with large shapefiles from

<http://www.census.gov/geo/www/tiger/>

Please check again with the latest qgis version from your platform and report back.
