Description

Dear devs,

the new Authentication configuration system with master password will be introduced into QGIS 2.12.
For the moment, only postgresql and webservices connections are supported.

In postgresql connection dialog, there is a "Configurations" tab that make the link between a database connection and a login/password that has been declared in the authentication database.

It would be great to have the same mechanism and dialog for Oracle connections to improve QGIS security and to ease Oracle users password management.

Perhaps could it be made for QGIS 2.14 ?

Best regards !
