QGIS Application - Feature request #13634

Having a feature form opened should not keep highlighted the feature unless it's the active (top level) dialog

Description

Identify a feature and open its feature form.

Do same thing for another feature.

You get two features highlighted in the map canvas. And you have no way unless closing one of the forms to know which form belongs to which geometry. Imagine you have many forms opened.

Having a form opened should not be enough to highlight the feature. Feature should be highlighted becaues of the opened form only if the form is at the top level of the dialogs (e.g, it's selected).
