QGIS Application - Bug report #13655
Bad metadata in the debian repository

2015-10-22 11:33 AM - Lars Luthman

Status:	Closed			
Priority:	Normal			
Assignee:	Jürgen Fischer			
Category:	Build/Install			
Affected QGIS version:	2.10.1	**Regression?:**	No	
Operating System:	Debian	**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:		**Copied to github as #:**	21690	

Description

The file http://qgis.org/debian/dists/stable/Release contains the line
     Suite: testing

even though it is in the 'stable' directory, and it also has the line
     Codename: jessie

where 'jessie' has been 'stable' since April. The packages associated with this dist all seem to have been built for stable/Jessie rather than testing/Stretch, so I assume that it's only the Suite line that is incorrect.

This causes problems when you try to add the QGIS repository on a Debian stable/Jessie system, since you can't actually install any of the packages from the repository without telling apt-get to allow 'testing' packages.

Similarly, http://qgis.org/debian/dists/oldstable/Release has the line
     Suite: stable

which should probable be oldstable instead.

The same thing seems to have happened after the Debian Wheezy release 2 years ago (#8649)
